General information

- Fever is a symptom, not a diagnosis. Rest, fluids, and observation may be appropriate for mild illness, but the cause and severity matter.
- Do not start, stop, or change medicines without following a clinician or pharmacist recommendation.

Seek urgent care

- Seek urgent help for breathing difficulty, confusion, seizure, bluish lips, severe dehydration, a rapidly worsening condition, or a very unwell child.
- Infants and young children with fever need extra caution. Contact a clinician promptly when you are concerned.

This fact sheet provides general health information only. It is not a diagnosis, prescription, or substitute for advice from a licensed clinician or pharmacist. For an emergency, seek urgent local medical help. In India, call 112.
