Created: 30 July 2026

General guidance

- Dehydration can occur with diarrhoea, vomiting, fever, heat exposure, or poor fluid intake.
- Small frequent sips of safe fluids may help when a person can drink safely. Use oral rehydration products according to the package or clinician instructions.

Urgent warning signs

- Seek prompt medical care for severe weakness, confusion, fainting, very little urine, inability to keep fluids down, blood in stool, or a very unwell infant or older adult.

This fact sheet provides general health information only. It is not a diagnosis, prescription, or substitute for advice from a licensed clinician or pharmacist. For an emergency, seek urgent local medical help. In India, call 112.
